New peptides that bind to or are recognized by alpha3-betal integrins, useful for inhibiting cell adhesion to extracellular matrix, cell motility and proliferation and for treating rheumatoid arthritis and cancer

Claim 4; Page 34; 84pp; English.

The present invention provides a number of peptides which bind to alphalbetal integrins. They are useful in the modulation of cell adhesion and motility, and in the treatment of cancer, diabetic retinopathy, rheumatoid arthritis, macular degeneration, atherosclerosis, psorlasis and restenosis. The present sequence is an example of one of the peptides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides a number of peptides which bind to alpha3betal integrins. They are useful in the modulation of cell adhesion and motility, and in the treatment of cancer, diabetic retinopathy, rheumatoid arthritis, macular degeneration, atherosclerosis, psoriasis and restenosis. The present sequence is an example of one of the peptides of the invention
                                                                                                                                                                                       Alphaßbetal integrin; angiogenesis; cell proliferation; cancer; diabetic retinopathy; restenosis; atherosclerosis; rheumatoid arthritis; macular degeneration; psoriasis; cell adhesion; cell motility.
                                                                                                                                                                                                                                                                                                                                                                                          New peptides that bind to or are recognized by alpha3-betal integrins, useful for inhibiting cell adhesion to extracellular matrix, cell motility and proliferation and for treating rheumatoid arthritis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of peptides which bind to alpha3betal integrins. They are useful in the modulation of cell adhesion and motility, and in the treatment of cancer, diabetic retinopathy, rheumatoid arthritis, macular degeneration, atherosclerosis, psoriasis and restenosis. The present sequence is an example of one of the peptides
Alphalbetal integrin; angiogenesis; cell proliferation; cancer; diabetic retinopathy; restenosis; atherosclerosis; rheumatoid arthritis; macular degeneration; psoriasis; cell adhesion; cell motility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Alpha3betal integrin; angiogenesis; cell proliferation; cancer; diabetic retinopathy; restenosis; atherosclerosis; rheumatoid arthritis; macular degeneration; psoriasis; cell adhesion; cell motility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         peptides that bind to or are recognized by alpha3-betal integrins,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     useful for inhibiting cell adhesion to extracellular matrix, cell motility and proliferation and for treating rheumatoid arthritis and

The present invention provides a number of peptides which bind to alpha3betal integrins. They are useful in the modulation of cell adhesion and motility, and in the treatment of cancer, diabetic retinopathy, rheumatoid arthritis, macular degeneration, atherosclerosis, psoriasis and restenosis. The present sequence is an example of one of the peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides a number of peptides which bind to alpha3beta1 integrins. They are useful in the modulation of cell adhesion and motility, and in the treatment of cancer, diabetic retinopathy, rheumatoid arthritis, macular degeneration, atherosclerosis, psoriasis and restenosis. The present sequence is an example of one of the peptides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to diagnosing cancer other than prostate cancer in a male mammal, comprising assaying a test sample for increased level of semenogalin, or cancer in a female by assaying for the presence of semenogalin. Administering a semenogalin protein or polypeptide fragment or a semenogalin. Protein or antibody or active fragment, or a recombinant vector expressing the protein or antibody, is useful for inducing an immune response to a cancer in a mammal, where the cancer is not prostate cancer and semenogalin is a marker. The invention is used to diagnose cancer, particularly of epithelial origin such as lung cancer, papillary renal cell carcinoma, colon cancer, especially small-cell lung cancer (SCLC), or a melanoma. The present sequence represents the amino acid sequence of the thrombospondin-1 sequence containing synthetic peptide which binds to alpha-3-beta-1 integrin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A new diagnosis for cancer other than prostate cancer in a mammal useful to detect cancer including lung cancer, particularly small cell lung cancer and melanoma comprises detecting semenogelin in a sample.

The present sequence is that of the N-terminal domain of human thrombospondin-1 (TSP) ADL70639. The invention relates to TSP fragments thrombospondin-1 (TSP) ADL70639. The invention relates to TSP fragment conclinical assays for cancer and for generation of antibodies and other colinical assays for cancer and for generation of antibodies and other binding agents. A method that distinguishes TSP from a TSP fragment or portion involves: (1) using an epitope shared by TSP and the TSP fragment or portion of TSP plus not in the fragment or portion; (2) using an epitope present in TSP but not in the fragment or portion to obtain a quantitation of TSP plus TSP fragment or portion of the TSP fragment or portion of TSP only; and (3) using the difference between (1) and quantitation of TSP put not in the fragment or portion. Suitable epitope present in TSP but not in the fragment or portion of the TSP fragment or portion is performed in order to obtain a quantitation of the TSP fragment or portion is performed in order to detect the presence, or monitor the course, of a disease or condition selected from cancer, renal failure, renal disease, atopic dermatitis, vasculitis, polyarteritis of infarction, liver disease, splenactomy, dermatchowistis, polyarteritis ondosa, systemic lupus erythematosus, lupus erythematosus Kawasaki theometrion, an opecific vasculitis juvenile rheumatoid arthritis, resulting, accompanied with placelet cut activation, a condition associated with intravascular coagulation, a condition associated with placelet activation, a condition associated with intravascular coagulation, a condition associated with machorial coagulation, a condition associated with endothelial activation, a condition and coagulation, a condition and proper properation and properation and properation and properation and prop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New purified thrombospondin fragment extracted from a body fluid, useful for diagnosing cancer e.g. adenoma, adenocarcinoma, carcinoma, lymphoma or leukemia or as calibrators, indicators, immunogens and analytes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        fragment, urticaria, hives, angioedema, a drug reaction, an antibiotic reaction, an aspartame reaction, atopic dermatitis, ecsema, hypersensitivity, scleroderma, conditions associated with plugging of vessels, a condition associated with a cryotibrinogen, a condition

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule comprising at least 8 contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino
              cardiolipin antibody. The cancer is selected from adenoma, adenocarcinoma, carcinoma, lymphoma, leukaemia, solid cancer, liquid cancer, pre-metastatic cancer, pre-metastatic cancer, pre-metastatic cancer, pre-metastatic cancer, a cancer with vascular invasion, internal cancer, skin cancer, cancer of the respiratory system, circulatory system, musculoskeletal system, muscle, bone, a joint, tendon or ligament, digestive system, liver or biliary system, pancreas, head, neck, endocrine system, reproductive system (male or female), genitourinary system, kidney, urinary tract, sensory system, nervous system, lymphoid organ, blood, a gland, mammary gland, prostate gland, endometrial tissue, mesodermal tissue, ectodermal tissue, andodermal tissue, a teratoma, a poorly-differentiated cancer, a well-differentiated cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human myocardial infarction-associated gene derived protein, SEQ ID 1022.

Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism in the individual's nucleic acids.

Claim 10; SEQ ID NO 1020; 145pp; English.

The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's The invention has an altered

altered risk for myocardial infarction in the individual. The invention altered risk for myocardial infarction in the individual. The invention further comprising at least a contiguous nucleotides where one of the mucleotides is an SNP given in the specification or its complement and encoding any one of the amino acid sequence given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an antibody that specification and main acid sequence given in the specification; an antibody comprising an smplified polypucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid molecule; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and comprising in SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and containing an SNP in a nucleic acid sof the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction method has an increased or decreased risk for developing myocardial infarction may be used in gene therapy. The method is useful in identifying an myocardial infarction may be used in gene therapy. The method is useful in identifying an myocardial infarction method has an increased or decreased risk for developing myocardial infarction may be used in gene therapy. The method is useful in identifying an myocardial infarction method has an increased or decreased risk for developing myocardial infarction method is useful in identifying an myocardial infarction method is not not reasting the model of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or method is useful in identifying an individual who myocardial infarction method is useful in identifying an individual who myocardial infarction method is useful in myocardial in ö Angiotensin converting enzyme splice variant; ACBV; interleukin 6; granulocyte colony stimulating factor receptor; glucagon; hypertrophy; platelet-derived endothelial cell growth factor; cardiovascular disease; cellular tumour antigen P53; cyclin-dependent kinase inhibitor 1C; vasoactive intestinal polypeptide receptor 2; arteriosclerosis; cancer; myocardial infarction; coronary arterial thrombosis; renal disease; diabetic nephropathy; muscular disease; immune disorder; arcoidosis; multiple sclerosis; immune complex nephritis; deep vein thrombosis; nonarcoidosic pulmonary granulomattous disease; endothelial abnormality; associated gene containing one or more SNP's of the invention. ```
The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy,
                                                                                                                                                                                                                                                                                                                                                                                              cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as asbestosis and vascular pathologies involving an endothelial
                  Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       dermatological, neuroprotective, thrombolytic, coaquiant, nootropic, vasotropic, antipsoriatic, antiangiogenic, gene therapy, inflammation, immune disorder, haematopoietic cell disorder; autoimmune disorder; allergic reaction; graft versus host disease; organ rejection;

AAC77607 to AAC78448 encode the human cancer associated proteins given in tissues and cells the genes are expressed in. Example of activities tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antithreumatic; antiarthritic; antidiabetic; antisyload; antialthritic; antidiabetic; antisyload; antialthritic; antidiabetic; antisyload; antialticyload; are antiantial antiviral; dermatological; neuroprotective; cardiant; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antiangiogenic. The nootropic; vasotropic; antipsoriatic and antiangiogenic. The coagulant; ameliorating medical conditions and diagnosing pathological conditions. Polynucleotides, polypeptides can be used for preventing, treating or ameliorating the proliferation, differentiation or mobilisation of immune cells to treat disorders of haematopoietic cells, autoimmune cills to treat disorders of haematopoietic cells, autoimmune rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB44240 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Angiotensin converting enzyme splice variant; ACEV; interleukin 6; granulocyte colony stimulating factor receptor; glucagon; hypertrophy; platelet-derived endothelial cell growth factor; cardiovascular disease; cellular tumour antigen PS3; cyclin-dependent kinase inhibitor 1C; vasoactive intestinal polypeptide receptor 2; arteriosclerosis; cancer; myocardial infarction; coronary arterial thrombosis; renal disease; diabetic nephropathy; muscular disease; immune disease; multiple sclerosis; immune complex nephritis; deep vein thrombosis; nonarcoidotic pulmonary granulomatous disease; endothelial abnormality; vascular disorder; asbestosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Angiotensin converting enzyme (ACEV) splice variant protein #15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  91.7%; Score 55; DB 3; Length 466; 91.7%; Pred. ```
sequence from the human peripheral blood cell by specific primer and reverse transcription-polymerase chain reaction (RT-PCR) method for coding TSF polypeptide, construction in human embryonic kidney cell 293 by AdEasy system, and packaging and expressing the recombinant adenovirus vector of TSF. It can suppress the growth and transfer of cancer. The present sequence represents the TSF polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Angiotensin converting enzyme (ACEV) splice variant protein #14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAU02914 standard; protein; 555 AA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis,
myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex nephritis, multiple sclerosis, cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as asbestosis and vascular pathologies involving an endothelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Angiotensin converting enzyme splice variant; ACEV; interleukin 6; granulocyte colony stimulating factor receptor; glucagon; hypertrophy; platelet-derived endothelial cell growth factor; cardiovascular disease; cellular tumour antigen P53; cyclin-dependent kinase inhibitor 1C; vasoactive intestinal polypeptide receptor 2; arteriosclerosis; cancer; myocardial infarction; coronary arterial thrombosis; renal disease; diabetic nephropathy; muscular disease; immune disorder; sarcoidosis; nultiple sclerosis; immune complex nephritis; deep vein thrombosis; nonarcoidotic pulmonary granulomatous disease; endothelial abnormality; vascular disorder; asbestosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies.
                                                                                                                                                                                                                            Gaps

CC --- FUNCTION: Adhesive glycoprotein that mediates cell-to-cell and cell-to-matrix interactions. Can bind to fibrinogen, fibronectin, cell-to-matrix interactions. Can bind to fibrinogen, fibronectin, laminin, type V collagen and integrins alpha-V/beta-1, alpha-CC V/beta-1, alpha-III/beta-3 and alpha-lib/beta-3. May play a role in dentinogenesis and/or maintenance of dentin and dental pulp.

C --- SUBUNIT: Homotrimer; disulfide-linked.

C --- SIMILARITY: Contains 3 EGF-like domains.

C --- SIMILARITY: Contains 1 TSP C-terminal (TSPC) domain.

C --- SIMILARITY: Contains 3 TSP type-1 domains.

C --- SIMILARITY: Contains 7 TSP type-1 domains.

C --- SIMILARITY: Contains 7 TSP type-3 domains.

C --- SIMILARITY: Contains 1 TSP type-1 domains.

Sequence 97, Application US/09939853A

Sequence 97, Application US/09939853A

Patent No. 6989232

GRNERAL INFORMATION:

APPLICANT: Burgess et al.

TITLE OF INVENTION: No. 6989232e1 Proteins and Nucleic Acids Encoding Same
FILE REFERENCE: 21402-099

CURRENT APPLICATION NUMBER: US/09/939,853A

CURRENT PILING DATE: 2001-08-27

PRIOR APPLICATION NUMBER: 60/228,191

PRIOR APPLICATION NUMBER: 60/267,300

PRIOR FILING DATE: 2001-02-08

PRIOR FILING DATE: 2001-02-20

PRIOR FILING DATE: 2001-02-20

PRIOR FILING DATE: 2001-02-20

PRIOR FILING DATE: 2001-02-20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TYPE: PRT
ORGANISM: Human

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH INFLAMMATORY AUTOIMMUNE DISEASE, METHODS OF DETECTION

TITLE OF INVENTION: AND USES THEREOF

FILE REFERENCE: CLO00790

CURRENT PELING DATE: 2000-01-28

PRIOR FILING DATE: 2000-01-28

PRIOR PAPLICATION NUMBER: 60/231,401

PRIOR PLING DATE: 2000-00-08

NUMBER OF SEQ ID NOS: 10823

SOFTWARE: FREESEQ FOR Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Sequence 462, Application US/11043806

Sequence 462, Application US/11043806

Publication No. US20060051774A1

GENERAL INFORMATION:

TITLE OF INVENTION: Novel Nucleotide and Amino Acid Sequences, and Assays and Methods

TITLE OF INVENTION: Novel Nucleotide and Amino Acid Sequences, and Assays and Methods

TITLE OF INVENTION: Novel Nucleotide and Amino Acid Sequences, and Assays and Methods

CURRENT APPLICATION NUMBER: US/11/043,806

CURRENT FILING DATE: 2005-01-27

NUMBER OF SEQ ID NOS: 575

SEQ ID NO 462

LENGTH: 459
                                                                                                                                                                                                                     Sequence 1022, Application US/10741600

Sequence 1022, Application US/20050026169A1

GENERAL INFORMATION:
APPLICANT: CARGILL, Michele et al.
TITLE OF INVENTION: GENETIC POLYMORPHISMS ASSOCIATED WITH
TITLE OF INVENTION: MYOCARDIAL INFARCTION, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001499
CURRENT APPLICATION NUMBER: US/10/741,600
CURRENT FILING DATE: 2003-12-22
NUMBER OF SEQ ID NOS: 73997
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 1022

New peptides that bind to or are recognized by alpha3-beta1 integrins, useful for inhibiting cell adhesion to extracellular matrix, cell motility and proliferation and for treating rheumatoid arthritis and cancer

Claim 4; Page 34; 84pp; English.

The present invention provides a number of peptides which bind to alphalbetal integrins. They are useful in the modulation of cell adhesion and motility, and in the treatment of cancer, diabetic retinopathy, rheumatoid arthritis, macular degeneration, atherosclerosis, psoriasis and restenosis. The present sequence is an example of one of the peptides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of peptides which bind to alphaibetal integrins. They are useful in the modulation of cell adhesion and motility, and in the treatment of cancer, diabetic retinopathy, rheumatoid arthritis, macular degeneration, atherosclerosis, psoriasis and restenosis. The present sequence is an example of one of the peptides of the invention
                                                                                                                                                                             Alpha3betal integrin; angiogenesis; cell proliferation; cancer; diabetic retinopathy; restenosis; atherosclerosis; rheumatoid arthritis; macular degeneration; psoriasis; cell adhesion; cell motility.
                                                                                                                                                                                                                                                                                                                                                                       New peptides that bind to or are recognized by alpha3-beta1 integrins, useful for inhibiting cell adhesion to extracellular matrix, cell motility and proliferation and for treating rheumatoid arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of peptides which bind to alpha3beral integrins. They are useful in the modulation of cell adhesion and motility, and in the treatment of cancer, diabetic retinopathy, rheumatoid arthritis, macular degeneration, atherosclerosis, psoriasis and restenosis. The present sequence is an example of one of the peptides
Alphalbetal integrin; angiogenesis; cell proliferation; cancer; diabetic retinopathy; restenosis; atherosclerosis; rheumatoid arthritis; macular degeneration; psoriasis; cell adhesion; cell motility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Alpha3betal integrin; angiogenesis; cell proliferation; cancer; diabetic retinopathy; restenosis; atherosclerosis; rheumatoid arthritis; macular degeneration; psoriasis; cell adhesion; cell motility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New peptides that bind to or are recognized by alpha3-betal integrins, useful for inhibiting cell adhesion to extracellular matrix, cell motility and proliferation and for treating rheumatoid arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 12;
